

About Us

Imperial Building Products (IBP) is a Canadian manufacturer of lightweight steel framing and structural solutions, supporting builders, architects and engineers with high-quality systems designed for performance, efficiency, and safety on today's job sites.

Now a part of CGC, we offer a reliable portfolio of industry-leading products with a focus on:

- Steel stud, track, framing and structural building systems.
- Composite floor solutions for mid-rise construction.
- Precision-manufactured components ready for installation.

Let's talk DeltaStud®

Whether you're targeting higher load capacity, better thermal performance, or faster installation, our team can help with technical guidance, project fit, and design support.

- Request spans, load data, and design assistance.
- Explore energy-efficient and cost-saving strategies.
- Find out if DeltaStud® is the right solution for your next project.

 LEARN MORE

DeltaStud®

WALL FRAMING SYSTEM

The DeltaStud® Advantage

DeltaStud® is a patented, engineered light-gauge steel stud system designed to provide increased structural capacity while significantly reducing thermal bridging.

Its open-web profile includes pre-stamped service openings, creating clear pathways for electrical, plumbing, and small HVAC runs without additional drilling or cutting.

Stronger Walls. Smarter Performance.

With DeltaStud®, projects benefit from higher combined load ratings, simplified service coordination, and measurable improvements in thermal performance.

Higher Structural Capacity

Supports greater up to 20% more capacity than conventional C-section studs depending on configuration.

Improved Thermal Performance

Engineered geometry helps reduce thermal bridging, supporting energy-efficient wall assemblies.

Services Made Simple

Stamped openings create clear pathways for electrical, plumbing, sprinklers, and HVAC.

Sustainability & Efficiency

100% recyclable steel and reduced material use support greener construction with less jobsite waste.

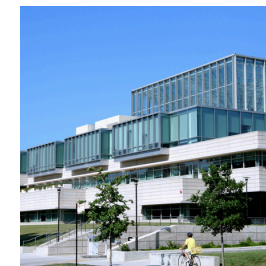

Where Delta Stud® Performs Best

DeltaStud® is ideal for projects that benefit from higher load capacity, reduced thermal loss, and integrated service routing.

Multi-Residential & Mixed-Use

Apartments, condos & social housing where structural capacity and energy performance matter.

Healthcare, Education & Hospitality

Schools, dormitories, seniors' residences, and hotels.

Commercial Construction

Offices, retail buildings, hotels, and mid-rise developments.
