UltraBond

The ultimate composite floor system.

The UltraBond composite floor system is an easy to use fast track construction solution.

composite.floor system

The UltraBond composite floor system is used for providing clear spans up to 11m. Its high strength to weight ratio allows the developer to reduce the overall weight of the building and foundation, while allowing for maximum architectural design freedom with its overall shallow depth of structural floor. Material and labor costs are significantly reduced, since all pre-labeled sections are produced to custom cut lengths and because of the overall simplicity of the system.

Advantage.UltraBond

- Provides a safe working platform during construction
- Create a thin, highly effective composite floor capable of spans up to 11m
- Provide a superior fast track solution to the construction industry
- Allows maximum architectural design freedom
- Fire rated assembly
- Easy to install using only 7 components
- High strength to weight ratio
- Compatible with all structural building systems
- System profile easily accommodates the placement of services
